I felt I was walking up a walkway or path and came to the object.

The object was rather thicker this time & this time the circles were located on the object on the lower portion of the object.

I sensed the object was circular in the front.

Once inside, I sensed men working, a crew, and men cleaning.

The work was physical, hard work, and I could see men placing a large heavy steel, cold object with a punt into a bigger frame, ~~an~~ which took on the same appearance. Then it was strapped down. It

was an assembly. The reason for it being strapped down was ~~been~~ to avoid movement. The object itself moves, but

these things should not move.

There are only allowed a certain amount of these things on the object because of standards I sensed security measures ~~with~~ associated with the object.

I then sensed a box - a surprise, a bumper, the frontal end was here. It was heavy & placed in the front to give a lightness.

I sensed a detecting or signals for location purposes.

I sensed this was object was taken after a model but change were added as it was produced. Only a few like it.

I had a sense of military. Gov't owned & although the men don't dress up here to work, I sensed blue formal uniforms.

I sensed that when these the object and the thing on the object worked, work, it became men make them work. Driven.

When the things are strapped down with I sensed heat. I sensed the straps came off & these things shot out & landed but didn't come back. New ones were placed in again. These things could be damaging.

I would not wish to be around one if it shot out.
